

■■ Cybersecurity Notes

Day 1 — Windows File System

Easy Language • Beginners ke liye

■ Sabse Pehle Yaad Rakho:

Windows mein jo bhi hota hai — programs, games, ya virus — **sab files aur folders mein store hota hai.**

File System samajhna Cybersecurity ka **PEHLA KADAM** hai! ■

■ Step 1 — Drives Samajhna

Tumhare computer ki storage alag-alag **drives** mein divide hoti hai:

Drive	Kaam / Use
C: Drive	■ Main system drive — Windows yahan install hota hai. SABSE IMPORTANT!
D: Drive	Data drive — photos, videos, documents rakhte hain
E: Drive	Extra storage ya USB / CD drive hoti hai

■ Step 2 — Important Folders

■ C:\Windows

- Yeh Windows ka **ghar** hai
- Iske andar poore Operating System ki files hoti hain
- System ka core yahan rahta hai
- Bina permission ke yahan changes **DANGEROUS** hote hain ■■

■ C:\Windows\System32 — SABSE IMPORTANT FOLDER

Yeh folder Windows ka **dil** hai! Iske andar hoti hain:

- **.exe files** — Programs jo directly run hote hain
- **.dll files** — Helper files jo programs ko support karti hain

■■ Cybersecurity Alert: Malware (virus) bhi yahi hide hone ki koshish karta hai!

Hackers system files ko target karte hain kyunki yahan se **poora system control** hota hai.

■ Step 3 — File Types Samajhna

Windows mein teen file types sabse zyada important hain:

File Type	Kya Hai?	Example
.exe	Program file — seedha run hoti hai	chrome.exe, notepad.exe
.dll	Helper file — akele nahi chalti, programs use karti hain	kernel32.dll, user32.dll
.bat	Script file — commands ka sequence run karta hai	setup.bat, install.bat

■ Real Life Example:

chrome.exe → Google Chrome browser open karega ■ (Safe)

virus.exe → System damage kar sakta hai ■ (DANGEROUS)

■■ RULE: Koi bhi unknown .exe file kabhi mat chalao!

Especially agar kisi ne WhatsApp ya email pe bheja ho!

■ Practical Task — Khud Karo!

■■ Yeh steps follow karo:

1. Windows key + E dabaao → File Explorer khulega
2. Left side mein "This PC" pe click karo
3. C: Drive double-click karke open karo
4. Windows folder dhundho aur open karo
5. System32 folder open karo

Ab observe karo — kaun se file types dikh rahe hain?

Jaise: .exe, .dll, .mui, .ini, .log, .sys etc.

■ Quick Revision — Yaad Rakhne Wali Baatein

■ C: Drive

Windows ka ghar, sabse important

■■ System32

System ka dil — malware yahan hide karta hai

■ ■ .exe

Program file — run hone wali

■ .dll

Helper file — akele kuch nahi karti

■ .bat

Script — commands ka set hota hai

■ **Golden Rule**

Unknown .exe kabhi mat chalao!

■ Day 1 Complete! Keep Learning, Keep Exploring! ■ ■
